

Stabilize Your Internet Connection

How It Works?

This setup can work with any kind of Internet connection as long you have these things on hand:

- > **Windows laptop.**
- > **Connectify software (Note: This only works on Windows).**
- > **Speedify VPN (the only VPN that combines multiple Internet connections).**
- > **At least two Internet connections that can be tethered to your Windows laptop.**
- > **USB cable (if you tether from your mobile data devices).**

In the case of the diagram above, that is the workaround that I currently implement, but you can connect to other networks like Ethernet or WiFi.

Benefits

Can make your Internet connection faster

Can make your Internet connection more stable

Save money and time on switching your Internet plan or provider

Better privacy and anonymity when you browse online
